ON CHEEKBONES

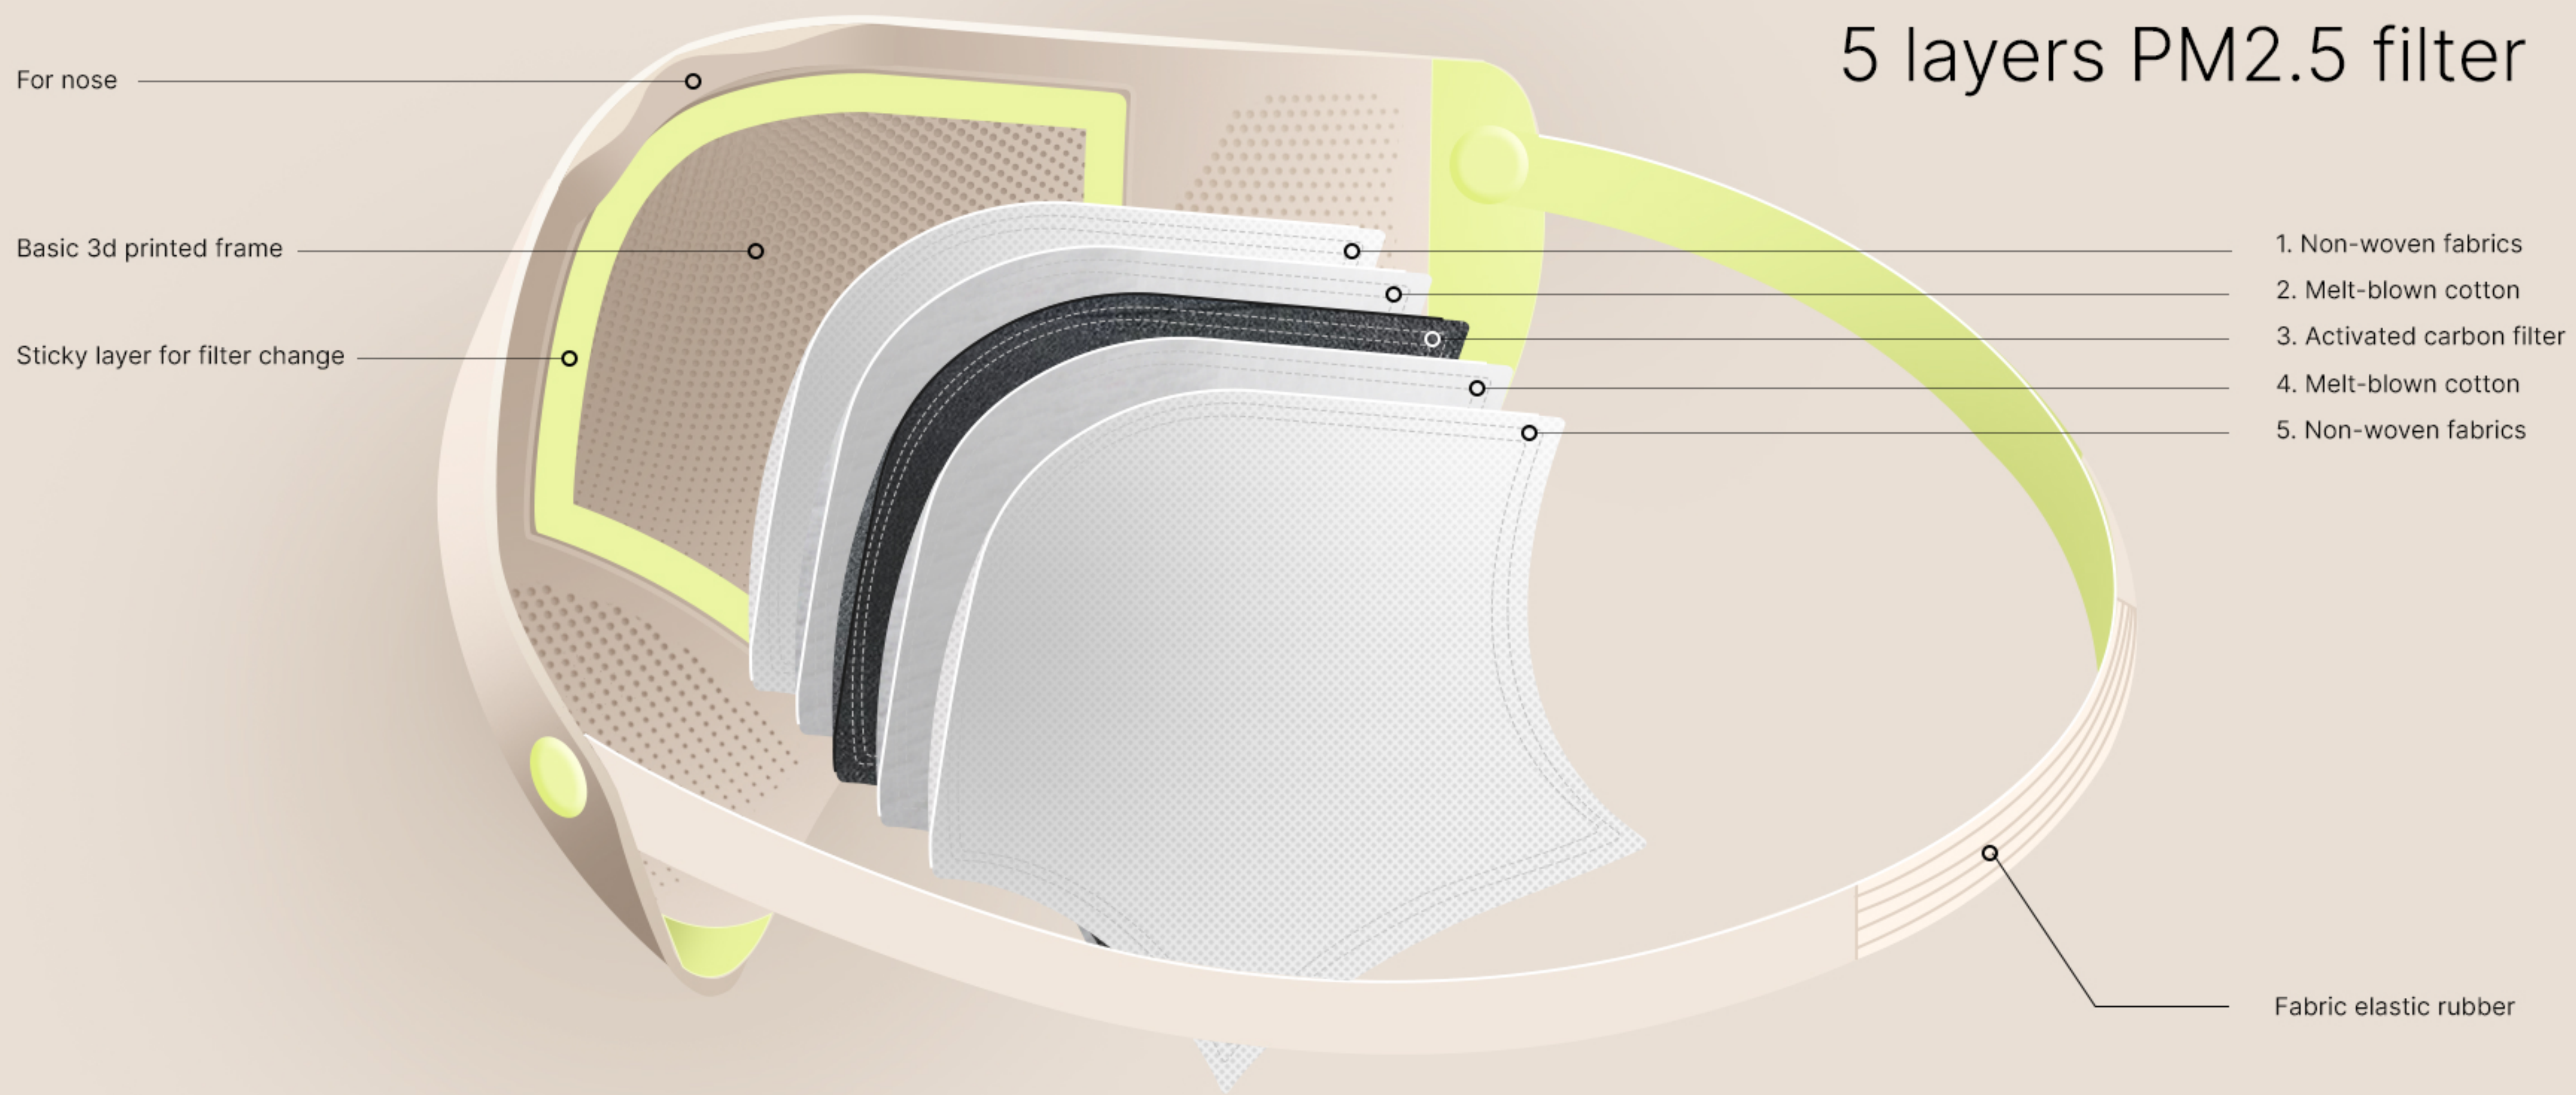

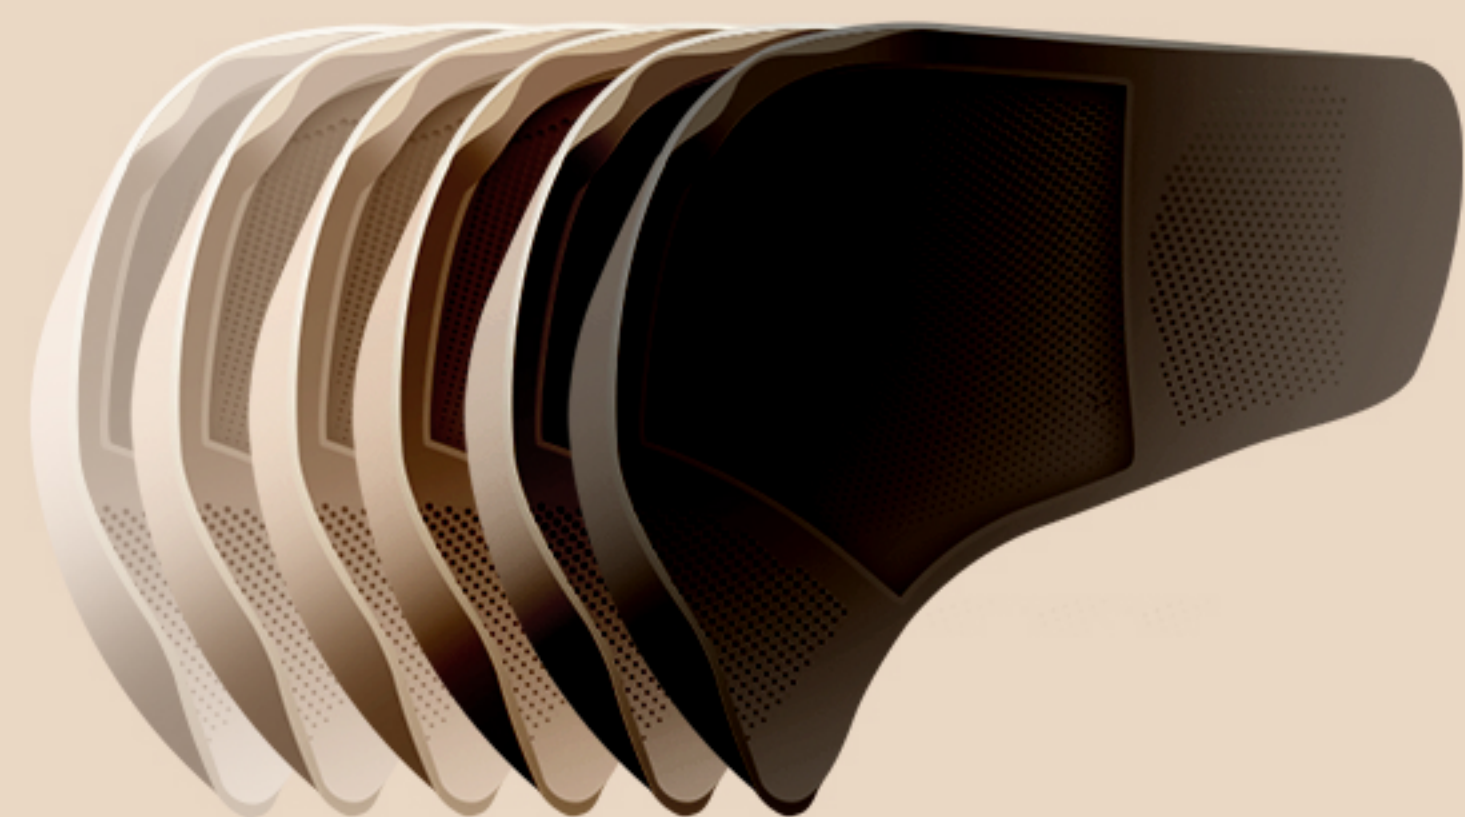

Form inspired from nature

5 layers PM2.5 filter

For medical workers

Can be easy printed in hospital
on 3d printer.

Washable element

Can be sterilized with
ultraviolet lamp

Easy changable filter
as sticker

The problem with valved respirators is that they do not filter the wearer's exhalation, only the inhale. This one-way protection puts others around the wearer at risk, in a situation like Covid-19.

It's for this reason that hospitals and other medical practices do not use valved respirators.

As fashion accessory

Base element in color skin tone

Countouring effect with pattern on cheeks
